SKILLS

Programming & Data

- Python (Pandas, NumPy)
- SQL
- Jupyter Notebook

Visualization & BI

- Power BI (DAX, Data Modelling)
- Microsoft Excel (Pivot Tables, VLOOKUP)

Analysis Techniques

- RFM Segmentation
- Churn Detection
- Exploratory Data Analysis

Databases & Tools

- SQLite, DB Browser for SQLite
- Git / GitHub

EDUCATION

MCA

Measi Institute of Information Technology, Chennai

2024 - 2026 | GPA 8.0

BCA

The New College, Chennai

2021 - 2024 | GPA 7.5

CERTIFICATION

PySpiders Data Science Certification

Python, SQL — May 2026

PROFESSIONAL SUMMARY

Data Analyst who turns raw data into clear business decisions — from RFM customer segmentation and churn detection to interactive Power BI dashboards with custom DAX. Backed by a Master's in Computer Applications and hands-on fluency in Python and SQL, with a track record of building projects independently end-to-end, from data modelling through to polished, portfolio-ready dashboards. Certified in Python and SQL (PySpiders); looking to bring a self-driven, detail-oriented analytical approach to a Data Analyst role in Dubai's fast-growing data and AI market.

TRAINING PROGRAM

Data Science Training Program *Nov 2025 - May 2026*

Qspiders (PySpiders)

- Completed a structured 6-month Data Science training program focused on Python and SQL fundamentals.
- Practiced data cleaning, querying, and analysis techniques through hands-on exercises, alongside supplementary practice in Power BI.

KEY PROJECTS

Dubai Real Estate Market Analysis *2026*

Personal | github.com/sufsaura/dubai-real-estate-market-analysis

- Built an end-to-end analysis of 87K Dubai property records (50K secondary sales, 25K rentals, 12K off-plan) from the Kaggle Dubai Real Estate: Sales & Rentals (2020-2026) dataset.
- Cleaned and unified the three transaction tables in Python (Pandas) into a star schema: a fact_listings table with community, metro-station, and date dimensions plus monthly area price data.
- Validated the model and wrote SQL queries in SQLite to compare price-per-square-foot across communities, property types, and market segments.
- Designed a 4-page Power BI dashboard (Market Overview, Market Segments, Metro & Location Insights, Investor Summary) with a custom navy and gold theme for buyers and investors.
- Published to GitHub with a README, findings summary, notebooks, SQL scripts, and dashboard screenshots.

Customer Insights Analysis *2025*

Personal | github.com/sufsaura/customer-insights-analysis

- Built a full SQL + Excel analytics pipeline on a synthetic Indian retail dataset spanning customers, orders, and products tables.
- Performed RFM (Recency, Frequency, Monetary) segmentation using layered SQL views to classify customers into high-value, loyal, at-risk, and lost segments.
- Defined and implemented a churn analysis model (90+ days of inactivity) to flag at-risk customers for retention targeting.
- Used DB Browser for SQLite to structure and query transactional data, then built an Excel dashboard to present segment-level insights to a non-technical audience.

Retail Sales & Profit Intelligence *2026*

Personal | github.com/sufsaura/retail-sales-profit-intelligence

- Built a full profitability analysis on the Olist Brazilian E-Commerce dataset (9 raw CSVs), cleaning and modelling the data in Python (Pandas) into a star schema (fact_sales with dim_date, dim_products, dim_customers, and dim_sellers).
- Designed a per-category cost simulation (60-75% of price, with per-transaction variance) to derive profit margins where no cost field existed in the source data, then validated the model with SQL queries in SQLite.
- Built a Power BI dashboard around a custom 'Ledger' theme — a near-black canvas with copper-toned profit metrics and teal-toned revenue metrics — to stand apart from typical templated dashboards.
- Tracked KPIs including revenue, simulated profit and margin, order volume, and seller/category performance, with filters for time period, category, and region.
- Documented the full build on GitHub (README, findings summary, notebooks, SQL scripts, Power BI file, and dashboard screenshots), mirroring the structure of the Dubai Real Estate project for a consistent portfolio.
